
mtb_mln_15_migDC1_Mtb−posvsneg_bubble.pdf
response to abiotic stimulus
apoptotic mitochondrial changes
regulation of alpha−beta T cell activation
carbohydrate phosphorylation
T cell proliferation
regulation of macroautophagy
transmembrane transport
regulation of hormone secretion
negative regulation of neuron apoptotic process
negative regulation of hydrolase activity
regulation of chemotaxis
cell surface receptor signaling pathway
positive regulation of type II interferon production
maintenance of protein location in mitochondrion
peptide hormone secretion
regulation of synaptic plasticity
response to reactive oxygen species
positive regulation of leukocyte migration
positive regulation of peroxisome proliferator activated receptor signaling pathway
regulation of ossification
regulation of protein ubiquitination
muscle structure development
cellular response to steroid hormone stimulus
extracellular matrix disassembly
lung cell differentiation
negative regulation of cell cycle
response to carbohydrate
B cell differentiation
anterior/posterior pattern specification
temperature homeostasis
cardiac muscle tissue development
organ growth
positive regulation of cellular component biogenesis
negative regulation of transcription by RNA polymerase II
cell adhesion mediated by integrin
regulation of actin filament−based process
actin filament organization
