tissue_0_neg_transDC_tissue−lungvsmln_bubble.pdf
cytoplasmic translation
ribosome biogenesis
chemical homeostasis
regulation of lymphocyte proliferation
small molecule metabolic process
rRNA metabolic process
humoral immune response
signal transduction by p53 class mediator
negative regulation of multicellular organismal process
regulation of cytokine production
positive regulation of gene expression
plasma membrane organization
regulation of lipid localization
positive regulation of cell differentiation
lipid catabolic process
regulation of localization
monocyte chemotaxis
positive regulation of triglyceride storage
cellular response to chemical stimulus
establishment or maintenance of cytoskeleton polarity
negative regulation of protein catabolic process
response to interleukin−4
fertilization
retrograde trans−synaptic signaling
ion channel modulating, G protein−coupled receptor signaling pathway
cellular response to fluoride
CD24 biosynthetic process
cellular response to insulin stimulus
animal organ development
multicellular organismal response to stress
regulation of membrane potential
