

time_blood_neg_Neutrophil_day-15vs28_bubble.pdf

GO term

adult behavior

negative regulation of defense response

regulation of triglyceride biosynthetic process

positive regulation of T cell activation

response to acetylcholine

protein lipidation

defense response

negative regulation of response to external stimulus

xenophagy

cytoplasmic pattern recognition receptor signaling pathway

regulation of mitochondrial fission

peptide antigen assembly with MHC protein complex

regulation of type I interferon production

cytolysis

response to bacterium

T cell mediated immunity

negative regulation of viral genome replication

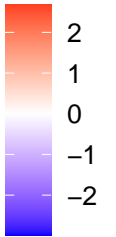

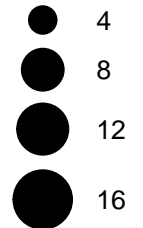

negative regulation of response to biotic stimulus

cellular response to interferon- β

positive regulation of leukocyte mediated cytotoxicity

antigen processing and presentation of peptide antigen

NES

 $-\log_{10}(p)$
