tissue_15_neg_iMO3_tissue−bloodvsmln_bubble.pdf
regulation of small GTPase mediated signal transduction
protein localization to cell periphery
vacuolar localization
negative regulation of neuron projection development
dephosphorylation
actomyosin structure organization
neuron projection development
regulation of supramolecular fiber organization
cellular process involved in reproduction in multicellular organism
bone remodeling
regulation of vascular permeability
pigment granule organization
cell morphogenesis
glycoprotein biosynthetic process
negative regulation of triglyceride metabolic process
response to dietary excess
negative regulation of MAP kinase activity
tachykinin receptor signaling pathway
enzyme−linked receptor protein signaling pathway
endosomal transport
acute inflammatory response
cell−matrix adhesion
cytokine−mediated signaling pathway
leukocyte degranulation
mast cell activation
cell−cell fusion
myotube differentiation
cellular catabolic process
positive regulation of lymphocyte proliferation
ketone metabolic process
organic acid biosynthetic process
leukocyte chemotaxis
peptide antigen assembly with MHC class II protein complex
cell killing
