tissue_15_neg_migDC2_tissue−lungvsmln_bubbl
cardiac muscle tissue development
muscle structure development
detection of stimulus
regulation of system process
response to lipid
formation of primary germ layer
telencephalon development
response to abiotic stimulus
reactive oxygen species metabolic process
negative regulation of growth
neurotransmitter secretion involved in regulation of skeletal muscle contraction
nucleobase−containing compound metabolic process
protein maturation
positive regulation of interleukin−4 production
response to molecule of bacterial origin
positive regulation of endothelial cell proliferation
positive regulation of catalytic activity
immune effector process
positive regulation of MAPK cascade
positive regulation of phagocytosis
regulation of defense response to virus by host
calcium−independent cell−cell adhesion via plasma membrane cell−adhesion molecules
viral process
negative regulation of cell projection organization
positive regulation of myeloid cell differentiation
lipid storage
cell surface receptor signaling pathway via STAT
response to type II interferon
