tissue_15_neg_resDC1_tissue−bloodvsmln_bubble.pdf
regulation of vesicle−mediated transport
cell−matrix adhesion
epidermal growth factor receptor signaling pathway
actin cytoskeleton organization
supramolecular fiber organization
bone development
phosphate ion transport
superoxide anion generation
regulation of JNK cascade
cell morphogenesis
amyloid−beta clearance
phagocytosis, engulfment
glycosaminoglycan metabolic process
cellular response to insulin stimulus
diphosphate metabolic process
vascular process in circulatory system
cell junction organization
very−low−density lipoprotein particle clearance
response to caloric restriction
protein import
positive regulation of neurofibrillary tangle assembly
lipoprotein catabolic process
lipid transport involved in lipid storage
high−density lipoprotein particle assembly
fatty acid homeostasis
steroid catabolic process
positive regulation of CoA−transferase activity
retrograde trans−synaptic signaling by lipid
oocyte maturation
intrinsic apoptotic signaling pathway in response to DNA damage
cellular extravasation
cytoskeleton organization
adult locomotory behavior
positive regulation of response to cytokine stimulus
ISG15−protein conjugation
response to bacterium
defense response to virus
