tissue_0_neg_resDC2_tissue−lungvsmln_bubble.pdf
tissue remodeling
cytokine−mediated signaling pathway
inflammatory response
regulation of blood pressure
positive regulation of tumor necrosis factor production
monocyte chemotaxis
inorganic ion homeostasis
lipid catabolic process
humoral immune response
plasma membrane organization
response to molecule of bacterial origin
ossification
chemotaxis
epithelial to mesenchymal transition
response to corticosteroid
amyloid−beta clearance
cellular response to molecule of bacterial origin
response to external stimulus
G protein−coupled receptor signaling pathway
negative regulation of cell population proliferation
cell adhesion
blood vessel development
signaling
regulation of multicellular organismal process
osteoclast differentiation
regulation of SMAD protein signal transduction
regulation of developmental process
renal system development
regulation of biological quality
cell junction assembly
localization within membrane
DNA−templated DNA replication
chromosome segregation
mitotic cytokinesis
