tissue_28_neg_resDC2_tissue−bloodvsmln_bubble.pdf
proteoglycan metabolic process
biomineral tissue development
receptor−mediated endocytosis
cellular extravasation
humoral immune response
system process
blood vessel development
regulation of cell motility
response to external stimulus
regulation of biological quality
fatty acid metabolic process
cell−substrate adhesion
cellular response to mercury ion
protein localization to plasma membrane
DNA repair
chromatin organization
metaphase chromosome alignment
DNA replication
chromosome organization
cell division
chromosome segregation
microtubule cytoskeleton organization involved in mitosis
