tissue_28_neg_transDC_tissue−lungvsmln_bubble.pdf
cell−cell junction organization
response to transforming growth factor beta
tissue development
behavior
response to interleukin−1
astrocyte development
cell surface receptor protein serine/threonine kinase signaling pathway
regulation of small molecule metabolic process
monocarboxylic acid transport
extrinsic apoptotic signaling pathway
gastrulation
regulation of ketone metabolic process
multicellular organism development
regeneration
circulatory system development
miRNA metabolic process
negative regulation of cell population proliferation
reproductive process
negative regulation of immune response
positive regulation of lipid biosynthetic process
regulation of inflammatory response
negative regulation of cell differentiation
external encapsulating structure organization
positive regulation of interleukin−2 production
memory
homophilic cell adhesion via plasma membrane adhesion molecules
positive regulation of phagocytosis
regulation of microtubule cytoskeleton organization
ceramide transport
transepithelial transport
calcium−mediated signaling
