tissue_28_neg_resDC2_tissue−bloodvslung_bubble.pdf
positive regulation of biological process
regulation of calcidiol 1−monooxygenase activity
negative regulation of response to stimulus
negative regulation of phosphate metabolic process
response to external stimulus
regulation of DNA−binding transcription factor activity
regulation of gastro−intestinal system smooth muscle contraction
adult behavior
response to cAMP
tissue development
in utero embryonic development
positive regulation of leukocyte cell−cell adhesion
detection of mechanical stimulus involved in sensory perception
positive regulation of multicellular organismal process
signal transduction in absence of ligand
inflammatory response
positive regulation of cell differentiation
positive regulation of leukocyte activation
cellular response to environmental stimulus
mitochondrial fusion
positive regulation of cytosolic calcium ion concentration
cell killing
canonical NF−kappaB signal transduction
extrinsic apoptotic signaling pathway
interleukin−1 production
cell surface pattern recognition receptor signaling pathway
establishment of RNA localization
myeloid leukocyte cytokine production
muscle cell proliferation
cellular response to lipid
cellular response to lipopolysaccharide
response to lipopolysaccharide
