tissue_0_neg_MC_tissue−bloodvslung_bubble.pdf
notochord development
response to isolation stress
cell communication
positive regulation of cellular process
negative regulation of response to external stimulus
positive regulation of macromolecule biosynthetic process
regulation of mitotic nuclear division
modulation of chemical synaptic transmission
cell surface receptor signaling pathway via JAK−STAT
pattern recognition receptor signaling pathway
negative regulation of multicellular organismal process
response to transforming growth factor beta
T cell differentiation
negative regulation of vasculature development
regulation of cell migration
inflammatory response
positive regulation of transcription by RNA polymerase II
alpha−beta T cell activation involved in immune response
leukocyte migration
response to ionizing radiation
multicellular organismal reproductive process
regulation of epithelial cell proliferation
response to alcohol
regulation of cell adhesion
cellular response to biotic stimulus
alpha−beta T cell differentiation
interleukin−1 production
