time_vs0_blood_neg_MC_day−15vs0_bubble.pdf
primary metabolic process
regulation of body fluid levels
coagulation
negative regulation of developmental process
antimicrobial humoral response
negative regulation of megakaryocyte differentiation
positive regulation of cell adhesion
antigen processing and presentation
cellular response to oxygen−containing compound
developmental process
ameboidal−type cell migration
protein maturation
epithelial tube branching involved in lung morphogenesis
response to endoplasmic reticulum stress
negative regulation of cell communication
organophosphate metabolic process
chemical homeostasis
developmental growth
regulation of cellular component biogenesis
regulation of organelle organization
cellular response to endogenous stimulus
biological regulation
regulation of cell shape
secretion
multi−multicellular organism process
tissue development
reproductive process
positive regulation of catalytic activity
carbohydrate derivative metabolic process
amide metabolic process
catabolic process
muscle structure development
